ERSO SNOW-TECH

Optimization system for saving costs and resources for existing snowmaking systems

ERSO develops due to years of research- in conjunction with science and technology for all existing Snow-making systems, adaptable system-components. This was especially created to improve the effectiveness of machine-snow production in borderline warmer temperatures when machine-snow-production with standard snow canons and lances is not longer economical

Cost Saving

Cost Savings:

We focus in cost savings for artificial snowing by installing ERSO SNOW-TECH at the Systems areas of power supply, water and air supply for snow-cannons and snow-lances.

Saving of resources

electricity, water

Planning and performance:

All components come from one source and are installed by the highly trained ERSO personnel.

Functional guarantee:

We guarantee this due to our long term experience with installations at home and abroad.

Technology

Earlier Start for snowmaking	plus 2°C earlier + longer snowing
Secured seasonal start	through higher efficiency at at-limit temperatures.
More stable snow-quality	delayed jellinging , +30% longer durability higher ride comfort, with less risk of injury
Working System	100% FREE from chemical
100% secured investment	through tested technology, Austria / Europe
Quick installation	adaptable to all snow-making systems
Development and production	“made in Austria” Function guarantee

Installation Scheme
